

User Stories

User Story	Acceptance Criteria
As a high school student, I want to talk with the AI about my interests, so it can suggest the best study track for me.	When I start a chat with the AI, it asks me some questions about what I like and what I am good at. Then it gives me one or two study tracks (General, Computer, Health, Management, Sharia).
As a high school student, I want to try a mock interview with the AI, so I can see my strong and weak points.	When I start the interview, the AI asks me questions like a real interview. Then it shows me a short report about my strengths and weaknesses.
As a student, I want a report that explains the result, so I can understand why the AI gave me this track or this feedback.	After I finish the chat or interview, I see a report that explains my answers and why the AI recommended that track or wrote that feedback.
As a student, I want to book a session with a human advisor (academic or HR), so I can get personal advice.	When I click Book Session, I can choose the advisor, pick a time, pay for it, and then get a confirmation.
As a parent, I want to subscribe for my child, so they can use the platform with full access.	When I subscribe, my child can use the AI as much as they want, and also get discount for advisor sessions.
As an advisor (academic or HR), I want to see the student's AI report before the meeting, so I can prepare.	When a student books with me, I can open their report and read it before the session.
As a school, I want to use the platform for all students, so they can get guidance and I can see general reports.	When the school subscribes, all students can use the platform, and the school gets a simple dashboard showing popular tracks and common strengths.
